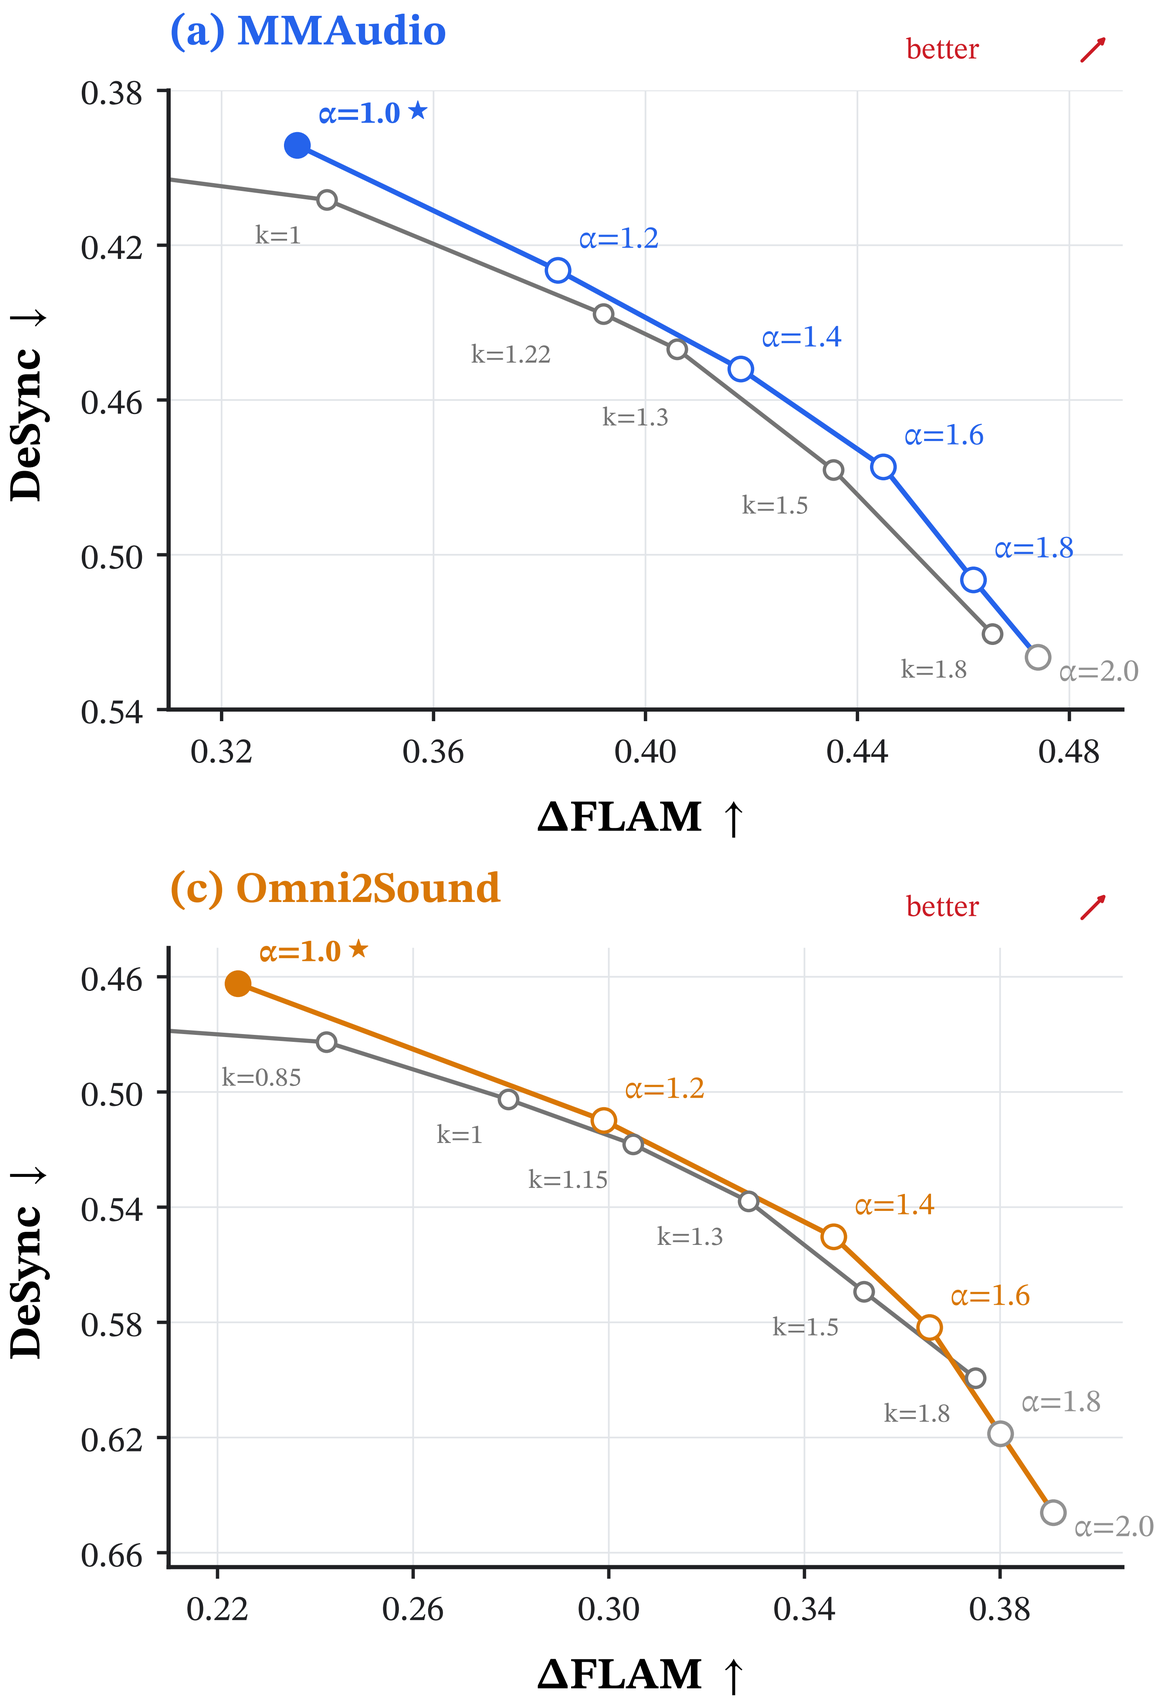
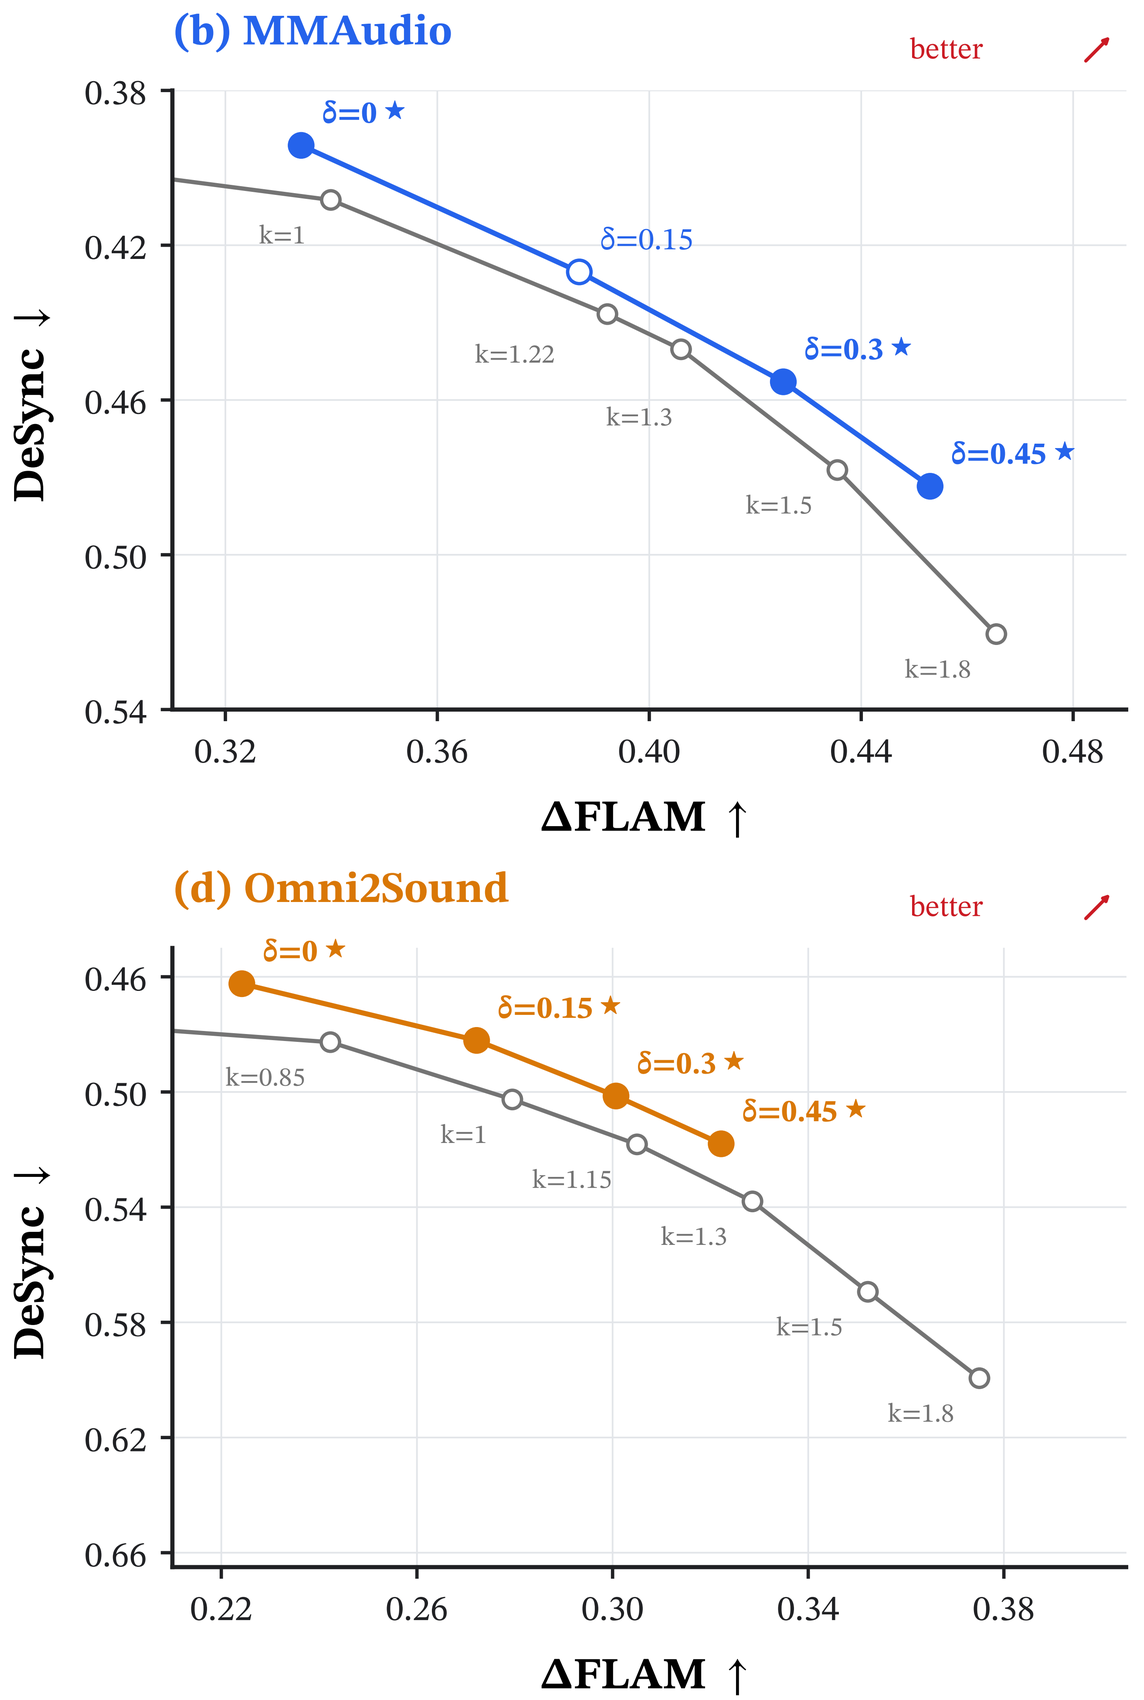
α sweep (submitted rule)

vs. constant γ



Margin δ sweep (refined rule)

vs. constant γ



★ significantly better than the constant-weight curve at matched ΔFLAM and at matched DeSync (cluster bootstrap, Holm over each sweep, $p < 0.05$); hollow: n.s.; gray: outside the constant-weight range.

Gray curve: constant γ (k sweep). Colored curve: TAP-Foley. Zoomed ranges; k = 0 is outside view. Both panels in each row share the same axes.
